

## Questionnaire to identify barriers in the implementation of sustainable technological solution

The SUSTAINOLIVE project aims to promote the sustainability of the olive oil sector through the implementation and promotion of a set of innovative and sustainable solutions in management practices, based on agro-ecological concepts and the effective and active exchange of knowledge in the main actors in the sector. One of the first tasks of the project is to identify the barriers that farmers have to overcome to implement sustainable agricultural practices. This questionnaire has been created for the barriers identification and we request your participation.

### BASIC INFORMATION

**AGE:**

**GENDER:**

**EDUCATION:**

Primary Education	Secondary Education	Higher Education

**PROVINCE:**

Below, you can read some sentences related to the implementation of sustainable agricultural practices and with which you may or may not agree. Please circle whether you strongly disagree (0), partially disagree (1), partially agree (2) or strongly agree (3) with each sentence.
